▶ CER Reports

Computer related stuff

- Setup thunderbird (SMTP)
- Setup cluster (ssh/scp with ProxyJump examples)
- See where there is place in the cluster (multitop.py script)
- Using Bash script to launch jobs in parallel
- How to kill jobs (top/htop, SIGTERM, SIGKILL)
- Shortcuts tips (quit from Vim/Vi, Ctrl+R)
- Create metadata file to keep note of where each job is ran (job1 on cluster9, job2 on cluster12, etc.)
- Use & to keep control of the terminal, use Ctrl+Z, redirect output, use nohup
- ssh -X clustern.. to use graphics (savefig for instance)
